

Vrishabh Combat Unmanned Ground Vehicle (UGV) is an advanced robotic land platform engineered to support armed forces in high-risk and combat environments without requiring an onboard human operator. The system is capable of remote operation and can function in semi-autonomous or fully autonomous modes based on mission needs.

Vrishabh is fully compatible with **Rakshak Autonomous Weapon Station** and features an integrated **two-axis stabilization platform**. It can be equipped with a wide range of weapon systems, including MMG, LMG, grenade launchers, and NSVT-class armaments or payloads of choice

Designed for agility and versatility, the platform offers high mobility and can carry payloads of up to **150 kg**, enabling additional mission profiles such as logistics resupply and casualty evacuation.

Vrishabh – Combat UGV

LxWxH	2250x1250x1420 mm
Weight	400 kg

Specifications

Power	60 HP
Battery	16 Kwh
Speed	50kmph
Endurance	6 hours
Range	~100 km
0-50kmph	4 seconds
Payload	150 kg

Towing	300 kg (level ground)
Torque	1000 Nm at wheels

Weapons platform

2 Axis Stabilization
MMG, LMG, NSVT, AGS 30
