

Wheeled Shvana

Advanced Quadruped Robot Platform

Overview

Bhairav Robotics unveils Bharat's first armed quadruped Shvana. The platform is packed with sensors that act like eyes and ears, augmenting situational awareness for users. Vision-based detection and recognition, industrial-grade audio perception, and advanced DSP help measure, isolate, and identify surrounding sounds in real time. Reinforcement learning algorithms and onboard computational power help Shvana quickly adapt to new surroundings.

Applications

- Strategic area monitoring
- Border patrol and surveillance
- Tactical situations
- Explosive detection
- Search and rescue operations
- Industrial inspections in confined, hazardous, or corrosive environments

Specifications

Specification	Value
Speed	~2-5 m/sec
Payload	10 kg
Weight	25 kg minus payload
Range	8-10 km
Communication	LTE, RF
Endurance	~120 mins
